KOTAK CONTRA FUND

An open ended equity Scheme following contrarian investment strategy

Investment Objective: The investment objective of the Scheme is to generate capital appreciation from a diversified portfolio of equity and equity related instruments. The Scheme will invest in stocks of companies, which are fundamentally sound but are undervalued. Undervalued stocks are stocks of those companies whose true long term potential is not yet recognised by the market. At times, the broad market takes time to appreciate the long-term potential of some fundamentally sound companies. Stocks of such companies are traded at prices below their intrinsic value and are regarded as undervalued stocks. We believe that, over a period of time, the price of a stock reflects the intrinsic value of the underlying company. Thus, the moving up of the price of the undervalued stock towards its intrinsic value will help us generate capital appreciation for investors. There is no assurance that the investment objective of the Scheme will be achieved.

The interest rate risk in a floating rate instrument or in a fixed rate instrument hedged with derivatives is likely to be lesser than that in an equivalent maturity fixed rate instrument. Scheme Inception : - December 02, 2003. The returns are calculated by XIRR approach assuming investment of ₹10,000/- on the 1st working day of every month. Since Inception returns are assumed to be starting from the inception date of the Scheme and calculated accordingly. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows and taking the time of investment into consideration. **The SIP performance details provided herein are of Regular Plan - Growth Option** Different plans have different expense structure. # Benchmark; ^ Additional Benchmark. TRI – Total Return Index, In terms of Para no 7.23 of SEBI Master Circular no. HO/24/13/11(1)2026-IMD-POD-1/I/7602/2026 dated March 20, 2026, the performance of the scheme is benchmarked to the Total Return variant (TRI) of the Benchmark Index instead of Price Return Variant (PRI). Alpha is difference of scheme return with benchmark return. *All payouts during the period have been reinvested in the units of the scheme at the then prevailing NAV. Source: ICRA MFI Explorer. (^) Fully or Party blocked against Interest Rate Swap (IRS). (^)This scheme has exposure to floating rate instruments and / or interest rate derivatives. The duration of these instruments is linked to the interest rate reset period. The interest rate risk in a floating rate instrument or in a fixed rate instrument hedged with derivatives is likely to be lesser than that in an equivalent maturity fixed rate instrument. Under some market circumstances the volatility may be of an order greater than what may ordinarily be expected considering only its duration. Hence investors are recommended to consider the unadjusted portfolio maturity of the scheme as well and exercise adequate due diligence when deciding to make their investments. Hedging Position through Interest Rate Swaps as on 30 Sep 2026 is 2.74% of the net assets. *For Fund Manager experience, please refer page 164-168 & 183-187. ## Risk rate assumed to be 5.28% (FBIL Overnight MIBOR rate as on 30th September 2026).***Existing investment in REITs held by debt schemes of Mutual Funds as on September 30, 2026, is grandfathered. **The expense ratio disclosed above represents the Base Expense Ratio (BER), including applicable statutory levies on expenses forming part of the BER, but excludes brokerage, transaction costs and related statutory levies. (^) Fully or Party blocked against Interest Rate Swap (IRS) (^)This scheme has exposure to floating rate instruments and / or interest rate derivatives. The duration of these instruments is linked to the interest rate reset period. The interest rate risk in a floating rate instrument or in a fixed rate instrument hedged with derivatives is likely to be lesser than that in an equivalent maturity fixed rate instrument. Under some market circumstances the volatility may be of an order greater than what may ordinarily be expected considering only its duration. Hence investors are recommended to consider the unadjusted portfolio maturity of the scheme as well and exercise adequate due diligence when deciding to make their investments. Scheme Inception : - July 14, 2003. The returns are calculated by XIRR approach assuming investment of ₹10,000/- on the 1st working day of every month. Since Inception returns are assumed to be starting from the inception date of the Scheme and calculated accordingly. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows and taking the time of investment into consideration. **The SIP performance details provided herein are of Regular Plan - Growth Option** Different plans have different expense structure. # Benchmark; ^ Additional Benchmark. Alpha is difference of scheme return with benchmark return. *All payouts during the period have been reinvested in the units of the scheme at the then prevailing NAV. Source: ICRA MFI Explorer. (^) Fully or Party blocked against Interest Rate Swap (IRS). (^)This scheme has exposure to floating rate instruments and / or interest rate derivatives. The duration of these instruments is linked to the interest rate reset period. The interest rate risk in a floating rate instrument or in a fixed rate instrument hedged with derivatives is likely to be lesser than that in an equivalent maturity fixed rate instrument. Under some market circumstances the volatility may be of an order greater than what may ordinarily be expected considering only its duration. Hence investors are recommended to consider the unadjusted portfolio maturity of the scheme as well and exercise adequate due diligence when deciding to make their investments. Scheme Inception : - May 02,2002. The returns are calculated by XIRR approach assuming investment of ₹10,000/- on the 1st working day of every month. Since Inception returns are assumed to be starting from the inception date of the Scheme and calculated accordingly. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows and taking the time of investment into consideration. **The SIP performance details provided herein are of Regular Plan - Growth Option** Different plans have different expense structure. # Benchmark; ^ Additional Benchmark. Alpha is difference of scheme return with benchmark return. *All payouts during the period have been reinvested in the units of the scheme at the then prevailing NAV. Source: ICRA MFI Explorer. (^) Fully or Party blocked against Interest Rate Swap (IRS). (^)This scheme has exposure to floating rate instruments and / or interest rate derivatives. The duration of these instruments is linked to the interest rate reset period. The interest rate risk in a floating rate instrument or in a fixed rate instrument hedged with derivatives is likely to be lesser than that in an equivalent maturity fixed rate instrument. Under some market circumstances the volatility may be of an order greater than what may ordinarily be expected considering only its duration. Hence investors are recommended to consider the unadjusted portfolio maturity of the scheme as well and exercise adequate due diligence when deciding to make their investments. Hedging Position through Interest Rate Swaps as on 30 Sep 2026 is 7.02% of the net assets. *For Fund Manager experience, please refer page 164-168 & 183-187. **The expense ratio disclosed above represents the Base Expense Ratio (BER), including applicable statutory levies on expenses forming part of the BER, but excludes brokerage, transaction costs and related statutory levies. Scheme Inception : - December 29, 1998. The returns are calculated by XIRR approach assuming investment of ₹10,000/- on the 1st working day of every month. Since Inception returns are assumed to be starting from the inception date of the Scheme and calculated accordingly. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows and taking the time of investment into consideration. **The SIP performance details provided herein are of Regular Plan - Growth Option** Different plans have different expense structure. # Benchmark; ^ Additional Benchmark. Alpha is difference of scheme return with benchmark return. *All payouts during the period have been reinvested in the units of the scheme at the then prevailing NAV. Source: ICRA MFI Explorer. (^) Fully or Party blocked against Interest Rate Swap (IRS). (^)This scheme has exposure to floating rate instruments and / or interest rate derivatives. The duration of these instruments is linked to the interest rate reset period. The interest rate risk in a floating rate instrument or in a fixed rate instrument hedged with derivatives is likely to be lesser than that in an equivalent maturity fixed rate instrument. Under some market circumstances the volatility may be of an order greater than what may ordinarily be expected considering only its duration. Hence investors are recommended to consider the unadjusted portfolio maturity of the scheme as well and exercise adequate due diligence when deciding to make their investments. *For Fund Manager experience, please refer page 164-168 & 183-187. **The expense ratio disclosed above represents the Base Expense Ratio (BER), including applicable statutory levies on expenses forming part of the BER, but excludes brokerage, transaction costs and related statutory levies.
